ABOUT ME

I'm a Creative Computing graduate who loves creating beautiful, usable digital experiences. I design and build front-end interfaces using HTML, CSS and JavaScript, and I'm also a artist I paint physical pieces and create scenery and illustrations. I'm seeking roles as a frontend developer, UI designer, or visual artist where I can combine my hands-on art practice with my design and coding skills.

Urdu	Native
Punjabi	Fluent

TECH STACK & TOOLS

HTML5 · CSS · JavaScript · Python · Node.js · GitHub · Figma · Canva · Android Studio · Unity Hub · VS Code · AI / ML · Google API · C++ · Circuit

PROJECT EXPERIENCE

Emerging Technologies — 2024
Group Debate Project
Analyzed the future of cybersecurity amid increasingly sophisticated cyber threats, with emphasis on emerging defensive strategies, and participated in group-level debates on ethical and technological implications

Creative Industry Challenge — 2024
Client Project – Qannas Cargo Services (Website Development)
I helped my group in developing a full, responsive website for Qannas Cargo Services, featuring service pages, contact and booking forms, and a simple admin interface; I handled frontend implementation, collaborated on branding, and deployed the site for client use.

Tomorrow's Web — 2025
Furry Friends – Animal Shelter Platform
Built a full-stack animal shelter website using HTML, CSS, JavaScript and Node.js, implementing frontend and backend features including About, Adopt a Pet, Rehome, Contact Us, Login and Signup pages, plus secure user authentication and admin management.

Physical Computing — 2026
Arduino Hardware Project
I prepared the Arduino project proposal: researched sensors and LED components, sketched circuit diagrams, and wrote pseudocode and C++ snippets outlining how I planned to build and control the system.

Personal Creative Work — Ongoing
Artwork
I create original physical artworks paintings, scenic pieces, and sketches and use my hands-on art practice to inspire my UI/UX and visual design work
